IMY 210
Theme Assignment 2: XML Schema and Namespaces

Using the provided XML file (validation.xml) create an **XML Schema** file that can be used to validate XML files that would describe the same data.

Provided files

validation.xml – A sample XML file that needs to be validated by your final XML schema.

Task

Following the validation rules provided in **validfile.xml**, create a new validation file, **TA.dtd**.

In your implementation you are required to show an instance of **custom named simple type**.

WARNING:
If you uploaded XML Schema is not **not well-formed**, you will receive **zero**.
If you uploaded XML Schema does not validate the provided XML file, you will receive **zero**.

Submission

- **Compress** your final XML Schema file (TA.dtd) into an archive named **TA2.zip**.
- Submit your ZIP file to the upload slot provided on clickUP before the deadline.
- Ensure that you have a backup of your final submission.
